

Reverse Words

Advanced - java

Write a `wordReverser()` method that will take a given string and reverse the order of the words. You may assume that the string is a sentence that contains only letters and spaces, with all words separated by one space.

For example, `wordReverser("Codecademy rules")` should return `rules Codecademy` and `wordReverser("May the Fourth be with you")` should return `you with be Fourth the May`.

This challenge was reported to have been asked at interviews with Facebook, as well as right here at Codecademy! If you've covered the material in [Pass the Technical Interview with Java](#) or an equivalent, you should be able to solve this challenge. If you have trouble, try refreshing your knowledge there first.
