Arrays

Flatten an Array

Advanced - `java`

Write a `flattenArray()` method that takes in a 2-dimensional array, flattens it into a 1-dimensional array, and returns it. You can assume that you will only be given one or two-dimensional arrays

For example, calling `flattenArray()` on `[[1, 2], [3, 4, 5])` should return `[1, 2, 3, 4, 5]`.

This challenge was reported to have been asked at interviews with Facebook, as well as right here at Codecademy! If you've covered the material in <u>**Pass the Technical Interview with Java**</u> or an equivalent, you should be able to solve this challenge. If you have trouble, try refreshing your knowledge there first.
